## PROFESSIONAL SUMMARY

QA Automation Engineer (SDET) with 6 years of relevant core QA experience and 8 years of total IT experience, delivering high-quality software for global clients including HSBC, Willis Towers Watson, Barclays and Citi Bank. Expertise in building scalable test automation frameworks using Selenium WebDriver (Java), Playwright (TypeScript), BDD Cucumber, Rest Assured, and TestNG across Banking, Insurance, and E-Commerce domains. Strong hands-on experience in Page Object Model (POM), Data-Driven Frameworks, CI/CD (Jenkins), Agile Scrum, SIT, UAT, and cross-functional stakeholder collaboration.

Built a production-grade agentic AI QA framework (Claude Code + MCP + Playwright) featuring a 29-rule anti-hallucination protocol, a bug-vs-intended oracle with confidence tiers, LLM-as-a-Judge evaluation, self-healing locators, and a persistent knowledge base — automating the full test-generation → execution → defect-filing → Jira lifecycle with zero manual updates.

## CORE COMPETENCIES

- Automation:** Selenium WebDriver, Playwright, BDD Cucumber, Rest Assured, TestNG
- Languages:** Java (Java 8 | OOPs | Collections | Exception Handling), TypeScript, JavaScript, SQL
- Frameworks:** Page Object Model (POM), Page Factory, Data-Driven, Hybrid Framework, 8-Layer POM Architecture
- Build & DevOps:** Maven, Jenkins, Git, GitHub, CI/CD Pipelines
- API & Data:** Rest Assured, Postman, Insomnia, JSON/XML Validation, XPath, CSS Selectors
- Test Process:** Test Strategy, Test Planning, Agile Scrum, STLC, SDLC, SIT, UAT, Functional, Regression, Smoke, Integration, BLAST
- AI & LLM:** Claude Code (MCP), LLM-as-a-Judge, Anti-Hallucination Protocol (29 rules), Self-Healing Test Automation, Prompt Engineering, RICEPOT, GROQ, Ollama, DeepSeek, Agentic AI
- Domains:** Banking, Insurance, E-Commerce, Pega CDH

## TECHNICAL SKILLS

- Automation Tools** Selenium WebDriver, Playwright, BDD Cucumber, Rest Assured
- Languages** Java (Java 8, OOPs, Collections, Exception Handling), JavaScript, TypeScript, SQL
- Frameworks** Page Object Model (POM), Page Factory, Data-Driven, Hybrid Framework, TestNG, 8-Layer POM Architecture
- Build & CI/CD** Maven, Jenkins, Git, GitHub, CI/CD Pipelines
- API Testing** Rest Assured, Postman, Insomnia, JSON/XML Validation
- Reporting** Extent Reports, Playwright HTML Reports, Allure, Custom TTA Reporter
- Test Management** Jira (Atlassian MCP integrated), Azure DevOps, Click Up
- Web Technologies** HTML, CSS, XPath, CSS Selectors, JavaScript, React (basic)
- Databases** SQL, MySQL
- IDEs** IntelliJ IDEA, Eclipse, VS Code, Claude Code (Agentic LLM CLI)
- Methodologies** Agile Scrum, SDLC, STLC, SIT, UAT, Functional, Regression, BLAST, RICEPOT
- Domains** Banking, Insurance, E-Commerce, Pega Marketing (CDH)
- AI & LLM Tooling** Claude Code (Agentic CLI), Model Context Protocol (MCP), GROQ, Ollama, DeepSeek, Prompt Engineering, RICEPOT, n8n (AI Workflows), LLM-as-a-Judge, Anti-Hallucination Protocol (29 rules), Auto-Fix Protocol (17 rules)

## WORK EXPERIENCE

| Company                  | Designation                       | Joining Date | Last Working Date |
|--------------------------|-----------------------------------|--------------|-------------------|
| LTM (MNC)                | Sr. QA Automation Engineer (SDET) | 29 Jun 2026  | Present           |
| Virtusa (MNC)            | Sr. QA Automation Engineer (SDET) | 28 Aug 2024  | 19 Jun 2026       |
| Capgemini (MNC)          | QA Automation Engineer (SDET)     | 18 Nov 2021  | 14 Aug 2024       |
| We Ingenious Technocrats | Manual & Automation Test Engineer | 17 Mar 2021  | 27 Oct 2021       |
| We Ingenious Technocrats | Manual & Automation Test Engineer | 13 Nov 2017  | 31 Dec 2020       |

## **VIRTUSA (MNC) | Sr. QA Automation Engineer (SDET) | Aug 2024 – Jun 2026**

*Client: HSBC | Domain: Banking – Pega Marketing / CDH | Team: 11 members*

### **Project: Bagel — HSBC (Banking Domain)**

- Led end-to-end automation of Pega Marketing / Customer Decision Hub (CDH) workflows for HSBC across 5 international markets: India, UAE, Singapore, Hong Kong & Australia
- Designed and developed Selenium WebDriver + Java scripts validating batch campaigns, pooled RM workflows, and MSD quarantine processes — reducing manual regression effort by ~40%
- Built scalable POM-based automation framework integrated with Maven; improved framework reusability by 35% through modular design
- Owned SIT and UAT test cycle execution; analyzed 100+ defects in Jira — tracked from logging through root cause analysis to production closure

## **CAPGEMINI (MNC) | QA Automation Engineer (SDET) | Nov 2021 – Aug 2024**

*Client: Willis Towers Watson | Domain: Insurance | Teams: 8–12 members*

### **Project: Client Renewal Questionnaire — Willis Towers Watson (Insurance Domain)**

- Designed BDD Cucumber (Given–When–Then) feature files covering multi-country insurance questionnaire creation, conditional logic, field validation, and client submission workflows
- Developed Selenium + Java + Cucumber + TestNG + Maven automation suite; maintained 200+ test scenarios across multiple product lines and subsidiaries
- Implemented POM architecture improving test maintainability by 30% and reducing duplication across regression suites
- Managed end-to-end test traceability in Azure DevOps ensuring 100% user story coverage before every sprint release
- Performed regression and retesting post-defect closure; zero regression escapes recorded across 13-month engagement

*Client: Citi Bank | Domain: Banking | Teams: 10–15 members*

### **Project: Genesis — Citi Bank (Banking Domain)**

- Designed and executed Selenium WebDriver + Java test scripts to validate upstream-to-downstream data flows in Citi Bank's Genesis IFW banking portal
- Built reusable POM-based Selenium framework with TestNG and Maven for data validation test suites across DMART and Staging tables
- Performed data accuracy validation against Functional Requirement Documents (FRD); authored Test Plan, Test Results, and RTM achieving 100% requirement coverage
- Coordinated with FRD owners and business requestors for defect resolution, UAT sign-off, and final business stakeholder approval

## **WE INGENIOUS TECHNOCRATS | Manual & Automation Test Engineer | Nov 2017 – Dec 2020 & Mar 2021 – Oct 2021**

*Domain: E-Commerce | Team: 10 members*

### **Project: U.S. Shop Tools — E-Commerce Web Application**

- Designed and developed Selenium WebDriver + Java automation scripts for end-to-end testing of a US e-commerce platform covering product catalog, cart, checkout, coupon management, and discount rules
- Built and maintained a scalable POM-based Selenium framework with TestNG, Maven, and Data-Driven approach for regression test automation
- Automated 100+ test scenarios covering product search, back-order handling, same-product and mix-match discount validations, and full checkout flows using Selenium + Java. Executed regression test suites in SIT and UAT environments; generated Extent Reports as test execution evidence for each release cycle
- Logged and tracked defects in Jira; collaborated with developers and product owners to validate fixes and confirm release readiness

## **AI-INTEGRATED PROJECT (SELF-INITIATED)**

- Architected an 8-layer Playwright + TypeScript POM framework with fixture-based dependency injection — 103 tests across 5 epics, cross-browser (Chromium/Firefox/WebKit), storage-state auth, sharding, multi-reporter (Allure/HTML/JSON).
- Built an agentic QA pipeline on Claude Code + MCP automating the full Jira lifecycle (test-case creation, execution, defect filing, status transitions) with zero manual updates, plus 10 custom prompt-engineered slash-command skills — cutting test-plan authoring time ~70%.
- Authored a 29-rule Anti-Hallucination protocol on a two-source model (Epic criteria = assertions; DOM = locators only) so the AI never invents selectors or expected behavior — plus a 17-rule Auto-Fix protocol with failure classification (broken-locator/real-bug/flaky/env), max-3-attempt retry, and an independent maker ≠ checker pass.
- Engineered a bug-vs-intended oracle with a persistent Knowledge Base (business rules, known defects, feature map) grading every failure as Confirmed (cites a documented rule) or Suspected (heuristic) before filing — eliminating false-positive bug reports.
- Implemented LLM-as-a-Judge evaluation (Deep Eval-style) scoring generated tests on faithfulness, coverage and relevancy, plus a static spec-quality gate (0–100) blocking flaky waits, hardcoded secrets and missing assertions.

## EDUCATION

Bachelor of Commerce | 2012 – 2015 | Veer Narmad South Gujarat University

## CERTIFICATIONS & CONTINUOUS LEARNING

- Selenium WebDriver with Java — Advanced Test Automation (hands-on project certified)
- Playwright with TypeScript — Modern Web Automation Framework
- BDD Cucumber — Behavior Driven Development with Java
- Rest Assured — API Test Automation with Java

## ACHIEVEMENT

- Self-built agentic AI QA pipeline: 10 Claude Code skills, a 30-rule anti-hallucination protocol, a 17-rule auto-fix protocol and a bug-vs-intended knowledge base on a 103-test Playwright framework — packaged as a portable, clone-able framework.
- Ultimate Team Player of 2019 — We Ingenious Technocrats (recognized for exceptional delivery, collaboration, and team leadership)
